

Maintenance Challenges - Learning Objectives

Describe and Identify

- General Maintenance Challenges
- Organisation Units Challenges
- User Challenges
- Sharing Challenges

General Maintenance Challenges

- General challenges with the maintenance app
 - Batch changes to metadata (example: correcting number type of data elements)
 - Searching/filtering (example: listing data elements in a data set/program)
- Dealing with unwanted objects is difficult due to dependencies
 - Removing data elements with data (1 data value entered for testing)
 - Removing users (perhaps they are associated with a private, (empty) dashboard)
 - Merging orgunits
 - Feedback when deletes fails is very limited

- Orgunit management including data set assignment is critical for analysis (completeness, disaggregations by type, ownership etc)
- What are best practices for
 - (Decentralised) orgunit management - who does what?
 - Data set assignment, where “cheating” is common. Assign based on facility type, those who should report, those who actually (sometimes) report...
