### Checklist – MOH Level

### Please check the following before start entering data to eRHMIS

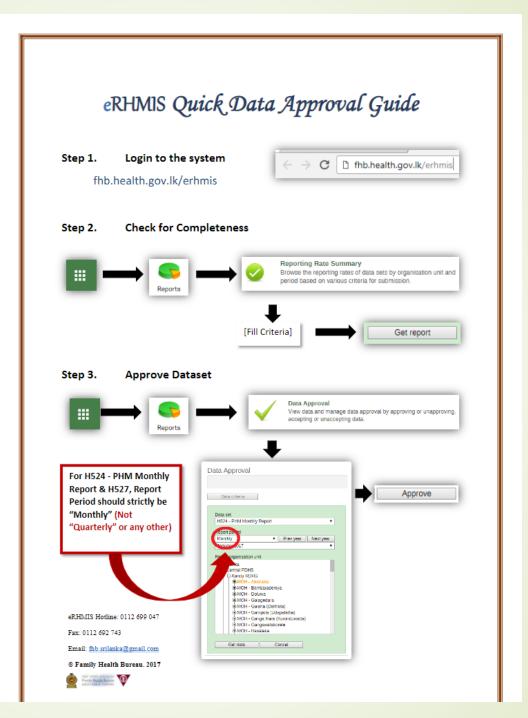

### 1. Login to the system

- a. You are given a list of preconfigured user names and passwords for your MOH area.
- b. Login to eRHMIS using username / password.

### 2. Check organization units

- a. Go to Apps > Data entry.
- b. You will get all the organization units assigned for data entry on the left panel. You can expand the list by clicking on [+] sign in front of an organization unit.
- c. Check whether all the PHM areas of MOH area are listed under your MOH.
- d. Expand each PHM area and check whether all the Grama Niladhari Divisions under them are correctly listed.
- e. Check whether all the clinics of MOH area are listed under your MOH.
- f. Under your MOH area, there should be a list of PHM areas and Clinics only. If something else is listed (e.g. Grama Nilahari Division) it is wrong.

THE QUARTERLY NEWSLETTER FROM FAMILY HEALTH BUREAU

### **Psychosocial Health Promotion of School Children**

Children are an asset to us. They are the future of our nation. It is therefore of utmost importance that we ensure our children develop not only physically but also mentally and psychologically. We should ensure that they are healthy, alert and active to face the challenges of our ever changing world. A healthy mind is also imperative for the success of the academic life of the child. Developing children to be wholesome individuals

Molding and developing a child to be a wellbalanced wholesome individual requires not only the inculcation of knowledge and attitudes but also necessitates that appropriate skills be imparted to our children. In order to present society with such well-balanced children who would one day blossom into well balanced adults it is of vital importance that special consideration is given not only to their physical development but also to their psychosocial development.

therefore should be our aim and vision.

The Global School Based Student Health Survey which was conducted among 2611 students aged 13-15 years showed that 4.4% of students felt so worried about something that they could not sleep at night during the past 12 months, while 9.9% had seriously considered attempting suicide during the past 12months 9.9%. Furthermore nearly 13.5% felt that suicide was a solution for a problem. It is also important to note that nearly 40% had experienced some sort of bullying. While 18% had accademic stress.

This data speaks to us that instilling upon our children the concepts of healthy psychosocial development and empowering children to face the psychosocial challenges and stresses they face in life could no longer be delayed. Psychosocial health promotion could be achieved through

- · Life Skills
- Family Harmony
- Positive school environment
   Safe Social Environment
- Counseling
- Mind fullness

As the best place to introduce the concepts of healthy psychosocial development is the school many steps have been taken to improve the psychosocial environment in schools. Training not only students but also teachers on life skills empowers both the teacher -student community to face the challengers of the ever changing world. Many training of trainer programmes on life skills have been carried out for district level public health staff across the country with the expectation that these trainers thus trained would carry on their responsibility of training district level public health officers in their areas. These trained officers thereafter carry out life skill programmes for teachers and students in schools. In addition the centre has also been involved in directly training peripheral staff on life skills as

### What are life skills?

Today great challenges are leveled at individual life through rapidly occurring social changes, social complexities and various social forces. Our ability to face these challenges of our daily lives successfully are called psycho-social skills or life skills. Life Skills are thus abilities for adaptive and positive behavior that enables us to deal effectively with the demands & challenges of everyday life.
